SOLUPIC

The SOLUPIC pigeon proofing system is especially developed to match the high standards of professional pest control operators around the world.

The design of this point system offers an outstanding effectiveness even in high bird pressure circumstances.
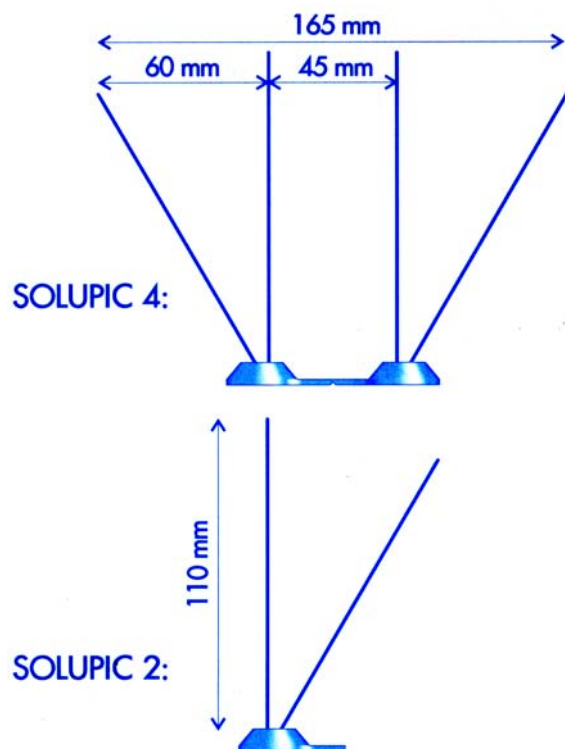

MADE TO LAST

Solupic is made of the most resisting, unalterable materials.

The base is made of UV resistant polycarbonate. Even in bright sunlight the product does not degrade.

The spikes are made of high-grade stainless steel of marine quality (316).

Solupic is available in two versions:

A notch in the middle of the system makes it very easy to change SOLUPIC 4 into SOLUPIC 2.

EASY TO APPLY

SOLUPIC comes in strips of 49.5 cm long, which ensures a quick and easy application of the system.

EFFECTIVENESS

The distance between two rows of spikes is only 4.5 cm. The design of the wires at an angle and the small distance between the rows make it impossible for the pigeons to penetrate the system or to land on it.

The thickness of the base gives the whole system a high grade of rigidity that resists all bird attacks.

APPLICATION

The SOLUPIC system has to be fixed with a premium-grade silicone adhesive. Thereto the surface should be clean, dust-free and solid. Too porous surfaces should be treated with a sealant first.
In doubt, first perform a test on a small surface.

Apply a few points of silicone adhesive to the base of the system, then apply immediately the SOLUPIC system to the surface and press gently.
